EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. R. Martin on 1/14/97.

2. The application has been amended as follows:

IN THE SPECIFICATION:

The following change has been made: "This is a Divisional of application..." has been replaced with --This is a continuation of application Serial No. 08/406,432, filed March 20, 1995 now abandoned, which is a Divisional of application Serial No. 08/203, 151, filed February 28, 1994 now U.S. Patent No. 5,452,473. +A

IN THE CLAIMS:

Art Unit: 2611

Claim 18, line 7, "." has been deleted.

3. The following is an examiner's statement of reasons for allowance:

As to claims 12 and 18-20, the combination of generating a limiting gain control setting in response to the closed loop power control value and the power level, and combining the closed loop power control value, the power level and the limiting gain control setting to generate a gain control signal were not taught nor suggested in the prior art.

As to claims 13-14, the combination of comparing the summation signal (wherein the summation signal is a combination of the received power level signal and the closed loop power control signal) to the maximum gain setting and adjusting the variable gain amplifier based upon the comparison outcome were not taught nor suggested in the prior art.

As to claim 15, the combination of comparing the digitized received power level signal to the maximum gain setting, decreasing the gain of the amplifier and prohibiting the closed loop power control signal from changing if the digitized received

Art Unit: 2611

power level signal is greater than the maximum gain setting were not found nor suggested in the prior art.

As to claim 16, the combination of comparing the digitized received power level signal to the maximum gain setting and decreasing the closed loop power control signal by a predetermined amount for every predetermined unit of time until the closed loop power is less than the maximum gain setting depended upon the comparison outcome and varying the gain of the variable gain amplifier in response to the closed loop power control signal depended upon the comparison outcome were not found nor suggested in the prior art.

As to claim 17, the combination of determining the difference between the digitized received power level signal and the maximum gain setting, integrating the difference to generate a gain control signal, adjusting the variable gain amplifier with the gain control signal and prohibiting the closed loop power control signal from changing the variable gain amplifier in response to the power control commands if the gain control signal is less than a predetermined value were not found nor suggested in the prior art.

Art Unit: 2611

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. In view of the papers filed 9/22/95, it has been found that this non-provisional application, as filed, through error and without deceptive intent, improperly set forth the inventorship, and accordingly, this application has been corrected in compliance with 37 CFR 1.48(b). The inventorship of this application has been changed by deleting Richard J. Kerr and Nathaniel B. Wilson as inventors of the instant application.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
